I. PHONONS IN CUBIC BULK PBTIO₃ AT THE BORDER OF THE FIRST BRILLOUIN ZONE

- Monkhorst-Pack grid: $6 \times 6 \times 6$.
- Mesh cutoff: 1200 Ry
- Force constant matrix computed in a $2 \times 2 \times 2$ supercell in real space (40 atoms in the supercell).
- All the atoms in the supercell in real space displaced along the three cartesian directions ± 0.03 bohrs.
- Force constant matrix computed at the corresponding theoretical lattice constant:
 - LDA lattice constant = 7.36051 bohr = 3.895012 Å.
 - GGA-Wu Cohen lattice constant = 7.40679 bohr = 3.919505 Å.
